

Material	Color Options (availability subject to change)	Description
PLA	 <p>Transparent, Black, White, Pearl White, Silver Metallic, Red, Orange, Yellow, Green, Blue, Magenta</p>	<p>Features: Good tensile strength and surface quality</p> <p>Applications: Household tools, toys, educational projects, show objects, prototyping, architectural models</p> <p>Non-suitable for: food contact, long term outdoor usage, or applications where temp is higher than 122 deg F</p>
ABS	 <p>Black, White, Pearl Gold, Gray, Silver, Red, Orange, Yellow, Green, Blue</p>	<p>Features: Excellent mechanical properties</p> <p>Applications: Visual and functional prototypes, and short-run manufacturing</p> <p>Non-suitable for: food contact, applications where temp is higher than 185 deg F, long term UV exposure</p>
PETG	 <p>Clear, Black, White, Gray, Silver, Red, Orange, Yellow, Green, Blue, Translucent Red, Translucent Green, Translucent Blue, Fluorescent Yellow</p>	<p>Features: Good printability, toughness, resistant to alcohols and weak acids or bases</p> <p>Applications: Visual prototyping, functional prototyping, short-run manufacturing, custom components, fit testing tooling, custom connectors or packages for liquids</p> <p>Non-suitable for: Applications where temp is higher than 169 deg F</p>
PET CF	 <p>Black, Gray, Blue</p>	<p>Features: Good printability compared to other carbon fiber materials, excellent performance properties</p> <p>Applications: Functional prototyping, tooling, manufacturing aids</p> <p>Non-suitable for: Applications where temp is higher than 169 deg F</p>
Tough PLA	 <p>Black, White, Red, Green</p>	<p>Features: Impact strength similar and higher stiffness compared to ABS, less brittle than regular PLA and gives a more matte surface finish quality</p> <p>Applications: Functional prototyping, tooling, manufacturing aids</p> <p>Non-suitable for: food contact, long term outdoor usage, or applications where temp is higher than 140 deg F</p>
PP (Polypropylene)	 <p>Translucent</p>	<p>Features: Durable, high toughness, semi-flexible, exceptional fatigue resistance, low friction, and good chemical, temperature and electrical resistance</p> <p>Applications: Functional prototypes, living hinges, connectors, lab equipment, moldings, protective covers</p> <p>Non-suitable for: food contact, applications where temp is higher than 221 deg F, long term UV exposure, or moisture immersion</p>
PC (Polycarbonate)	 <p>Transparent, Black, White</p>	<p>Features: High toughness, temperature resistance, flame retardant characteristics</p> <p>Applications: Functional prototyping, engineering parts, tools, lighting, molds, short-run manufacturing</p> <p>Non-suitable for: food contact, applications where temp is higher than 230 deg F</p>
TPU 95A	 <p>Black, White, Red, Blue</p>	<p>Features: Qualities of rubber, exceptional wear and tear resistance, high impact strength, Shore A hardness of 95, up to 580% elongation at break, and resistant to many common industrial oils and chemicals</p> <p>Applications: Functional prototyping, grips, guides, hinges, sleeves, snap-fit parts, and protective cases</p> <p>Non-suitable for: food contact, applications where temp is higher than 212 deg F, long term UV exposure, or moisture immersion</p>
Nylon	 <p>Translucent, Black</p>	<p>Features: Industrial grade impact strength and abrasion resistance, durable, high strength-to-weight ratio, low friction, and good corrosion resistance to alkalis and organic materials</p> <p>Applications: Functional prototyping, tooling, industrial modeling</p> <p>Non-suitable for: food contact or applications where temp is higher than 176 deg F</p>
NylonX	 <p>Matte Black</p>	<p>Features: Nylon reinforced with micro-carbon fibers to get a tough filament capable of creating parts with stiffness, impact resistance, and high tensile strength</p>
